

VCS

Version Control is a system that records changes to a file or set of files over time so that you can recall specific versions later. For example, if you have an error in your code on the newest version of a project, you can easily go back to an earlier version of the same project. Every version is uncially identified with its own version number and the username. The main usage of VCS is, restoring old versions of projects, record major changes on files. Simultaneous use of files of multiple users.
